

There really are boys behind our business. Named for our three boys, Florida Boys Caladiums is a 4th generation family owned and operated business.

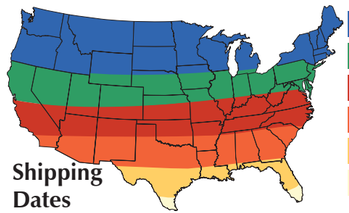

Growing Tips

Caladiums are tropical by nature and need hot, but well drained soil. Consistent hot weather is necessary for germination. The hotter the temperature, the faster they will grow. Bulbs should be planted eye upward for fastest sprouting. Plant bulbs 2 inches under the soil when the nighttime temperatures are consistently above 65 degrees. Caladium germination rates can range from 2 weeks to over 12 weeks depending on nighttime temperatures.

Fancy leaf caladiums have medium to large heart shaped flat edge leaves and range in height from 12 - 30″ with a leaf size between 8-15″ in length.

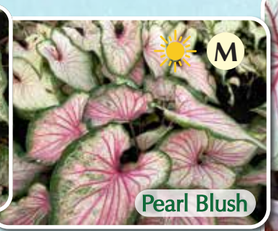

Strap caladiums have heart shaped elongated leaves with ruffled edges and can range in height from 8 to 18″. Leaf size is between 4-10″ in length.

Dwarf leaf caladiums resemble fancy leaf but range in height from 10-16 inches and have a leaf size between 6-10″ in length.

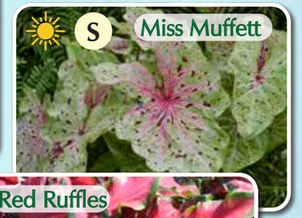

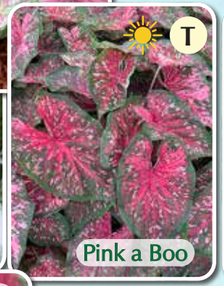

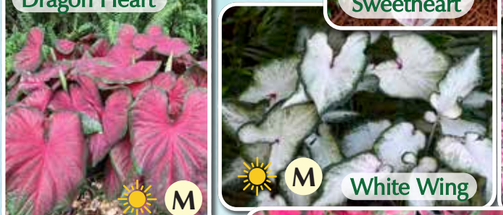

Strap Leaf & Dwarf Varieties

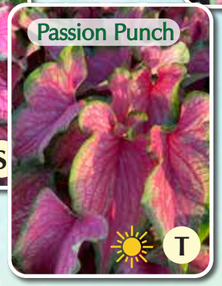

Growing Key

Height
S = 8-12"
M= 12-18"
T=18-25"

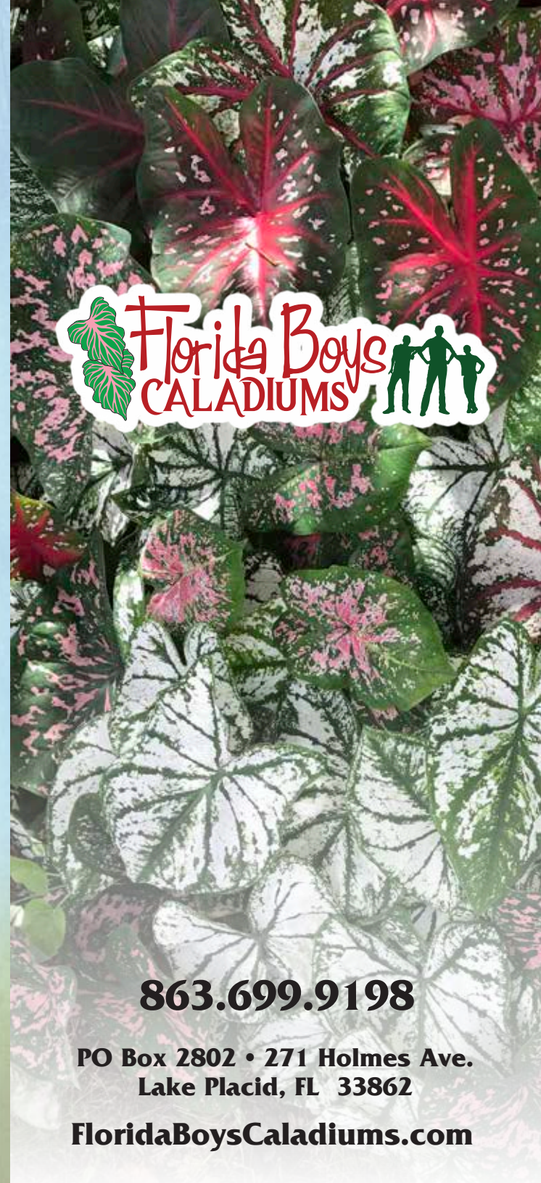

Sun Tolerant

Caladiums are tropical plants, grown from a bulb. They thrive in warm, moist conditions. Ideally, caladiums should be planted in a partially shaded area, but most are capable of growing in full sun.
Recommended spacing shown in chart will typically result in a nice full bed with no gapping between plants.

Grade	Bulb Diameter	Planting Distance
2	1-1½"	2-4"
1	1½-2½"	4-7"
Jumbo	2½-3½"	8-10"
